## Invitations

Invitations allow telephones to self-register in the lock as users. In a company context, for instance, the invitation function allows colleagues to add their smartphone to the user list thanks to the invitation code they are sent, without needing to physically take their smartphone near to the door for data storage purposes.

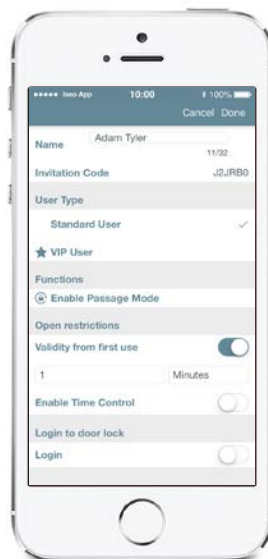

The administrator must first of all programme the invitation code on the lock as one of the 300 users. When the user arrives in front of the door, he/she selects it and types in the invitation code. The door is opened via the smartphone.

At the same time, the telephone self-registers in the user list for the period of time specified in the invitation. The invitation code can be used once only.

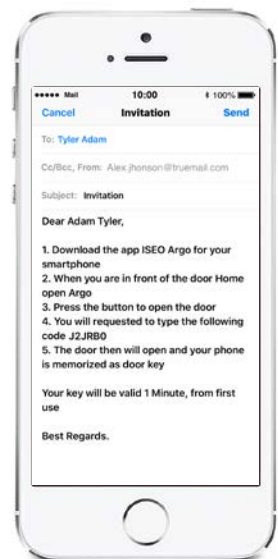

**ADD  
INVITATION**

The administrator selects “add user” and adds an invitation code to the user list for that door.

**FILL IN INVITATION  
PARAMETERS**

The administrator programmes the invitation parameters as for a user. In addition to validity and time schedules, the validity can also be specified in minutes/hours/days from the first use of the invitation code.

**SEND INVITATION**

The administrator sends the invitation code via e-mail to the user who isn't yet registered on the door.

RECEIVE INVITATION

The user receives the invitation code on his/her telephone.

SELECT DOOR

The user opens the Argo app and presses the door opening button. The invitation code is requested.

ENTER INVITATION CODE

When the valid (pre-stored) invitation code is typed in, the door opens and registers the telephone in the user list. The invitation code can be used once only.
