

## ISEO COMBINES CLOUD WITH MECHATRONICS: F9000 CYLINDER COMBINED WITH SOFIA LOCKS 'LUCKEY' SOFTWARE FOR FLEXIBLE ACCESS MANAGEMENT

Pisogne, 17 November 2022 - ISEO Ultimate Access Technologies, a leader in mechanical and electronic solutions for security and intelligent access management, announces the **integration of the F9000 mechatronic cylinder into Luckey, the software of Sofia Locks** (a company specialized in cloud native access control solutions part of ISEO).

Thanks to a secure and reliable cloud platform, Sofia Locks - an innovative start-up recently acquired by ISEO Ultimate Access Technologies - offers the most versatile and advanced access solutions on the market. **Luckey software**, known for its high number of references and ability to digitally control any type of door in any circumstance, **represents the ideal solution for co-working spaces, co-living spaces, medical centres, co-housing and business environments.**

Today, ISEO Ultimate Access Technologies' new **F9000** locking technology, **a state-of-the-art mechatronic key system**, complements the **range of devices supported by Luckey software.**

The F9000 mechatronic cylinder **can be installed on any door like a normal mechanical cylinder and has the same ease of maintenance** due to the absence of electrical wiring or battery inside the cylinder itself. F9000 keys have all the integrated electronics that enable smart access control, including features such as **programmed access authorizations and access logging.**

The new F9000 mechatronic system integrated with Luckey software therefore perfectly serves all those cases where neither electronic wiring nor batteries are possible or desired. **The F9000 keys integrate both a mechanical and electronic opening system:** the latter is easily programmable via the Luckey App on the smartphone, by the operator or even by the authorized user. The electronic system brings intelligent access control to even the simplest doors (such as those for technical rooms) where wiring is not an option and only conventional locks can be fitted. The access period can be easily programmed and all opening attempts are recorded in the key memory.

F9000 keys are a real passkey for traditional master key systems, but also for innovative digital opening systems. They are designed to open a range of traditional **mechanical locks** and, at the same time, are dynamically programmed to access **mechatronic** and even **fully digital smart locks**.

This new hardware product enhances the Luckey platform, making it in fact the most complete solution on the market: through the same interface, the software will be able to manage:

- MIFARE Classic/DESFire badges
- Smartphones (BLE)
- Mechatronic keys
- Support for Master-Key mechanical systems

Find out more about [F9000 mechatronic cylinder and Luckey Software for access control](#)

Sofia Locks is specialized in cloud-native access control solutions, provides PropTech access control solutions that support security and collaboration. The company supports market leaders in digitalization and designing new businesses. It is a partner of key players in the flexible space sector (co-working, co-living, retail) and companies coming from different industries, by offering a combination of security and business know-how.

ISEO is international leader in design, manufacturing and sale of mechanical and connected solutions for access security and smart management. It operates through 14 societies, 5 production sites in Italy, France, Germany and Romania with a widespread and international distribution network. ISEO has about 1.200 employees, 500 of which in Italy. Today the company is able to combine the strong family company imprint, which has its roots in 50 years of history, with an international and innovative spirit, in order to quickly answer and anticipate markets' and customers' needs. Thanks to an increasing integration between the best of precision mechanics and smart electronics, ISEO brings the value of safety to a new dimension: the freedom to move, through Ultimate Access Technologies philosophy.
